# The Squeezyband Difference

Squeezyband is the smart choice for killing germs on the go. Do not settle for inferior substandard copies of our product which do not take care about consumer safety. Squeezyband is manufactured of the highest medical grade materials to ensure both high customer satisfaction and safety.

# Quality You Can Trust

Our mission at Squeezyband was to develop a Reusable, dependable and high quality Medical Grade Hand Sanitizer band that could help keep people safe during this current pandemic. With that in mind we set out to produce a product that can handle medical grade liquids while keeping people safe.

## Medical / Food Grade Material

We only use high quality Medical and Food Grade Silicone in the construction of the Squeezyband. This is highly essential for any product that has direct skin contact for long periods of time.

## Non Leeching Materials

Most of our competitors use non-medical grade silicone in their products which allows the liquid inside to leech into the silicone material which degrades both the silicone and liquid.

## Leak Free Construction

Our product is precision manufactured to help ensure that all Squeezyband components fit together precisely to form an airtight seal to not accidentally leak under normal use situations.

## No Applicator Needed

Unlike other dispensing bands, the Squeezyband does not need an applicator or syringe to fill the band, making it super easy to fill your Squeezyband on the go.

## Works with both Liquid and Gels

Squeezyband comes packaged with multiple orifices so you can dispense both loose liquids or gels. No matter what type of liquids or gels you want to dispense we have you covered.

## Refillable, Reusable & Washable

The Squeezyband can be refilled as many times as needed and will hold up to 15ml (0.5 Oz) of liquid or gel at one time in the bladder. You can also safely wash the Squeezyband to keep it clean.
